### **ENSTOR Announces Expansions to Two Key Gas Storage Facilities**

HOUSTON -- ENSTOR has announced expanded storage capacities at two of its U.S. gas storage facilities: Caledonia in Lowndes County, Mississippi, and Grama Ridge in Lea County, New Mexico.

"Enstor continues to invest in facility expansion through the addition of interconnects or by increasing capacity in locations where market conditions are favorable" said Pat DeVille, president of ENSTOR, "We are always focused on leveraging our various gas storage and hub service facilities to give customers superior access to major pipelines, rapid injection and withdrawal capacity, and a range of service contract options."

With that in mind, the high-deliverability, multi-cycle Caledonia facility has increased its maximum certificated working gas capacity from 16.9 Bcf to 22.0 Bcf. That effectively pushes maximum daily withdrawal rates to 550,000 Mcf/day and the maximum injection rate to 558,000 Mcf/day.

Caledonia is connected to Tennessee Gas Pipeline on its 500 Leg in Zone 1, and is located in an area traversed by numerous new and existing interstate pipelines which access the prolific Barnett, Woodford and Haynesville shale production areas. Additionally, this pipeline serves markets in the Northeast, Southeast and Ohio Valley regions. Caledonia is in an excellent location to service electric power generation and natural gas distribution markets, giving customers access to firm and interruptible storage opportunities.

The Grama Ridge facility--which offers reliable, low-turn storage suitable for managing seasonal and operational needs in the Permian region--also recently expanded by more than 2 BCF to in excess of 9.5 BCF of capacity. Before the end of the year, Grama Ridge will complete an additional pipeline interconnect with NGPL with an incremental 35,000 MMBtu/day of access to Permian and MidContinent supply basins, with the potential for future expansion to 150,000/d, if the market proves up.

Grama Ridge is currently interconnected with the El Paso pipeline in the Keystone pooling area and with DCP's Raptor Pipeline, an intrastate system.

For details regarding storage availability at these or any other Enstor gas storage facility, contact Kay Atchison at [kay.atchison@enstorinc.com](mailto:kay.atchison@enstorinc.com) or 281-374-3075.

ENSTOR utilizes its experience and the operational characteristics of its storage facilities to provide its customers with services that readily adapt to the changing marketplace. Headquartered in Houston, Enstor is an Iberdrola Renewables company and part of the multinational energy giant Iberdrola SA.
